

## School Gardens

# Succulent Cutting Terrariums

## Supplies

- Assorted small succulent cuttings
- Terrarium
- Small pebbles or gravel
- Cactus/succulent potting soil
- Decorative elements such as stones, mini figurines, seashells, or small driftwood sticks
- Spray bottle

## Assembly

1. Add a layer of small pebbles or gravel to the bottom of the terrarium for drainage.
2. Add a layer of gritty cactus/succulent potting soil, careful not to spill out of terrarium.
3. Gently place any decorative items you want surrounding your succulent cutting.
4. Spritz the soil lightly with water.
5. Place your succulent cutting on the soil, gently nestling in any fragile roots.

## Care

Keep indoors in bright sunlight and lightly water by spritzing the soil once or twice a week. Terrariums make great gifts too!
